VALERII NAVALNYI

Full-stack Developer / Designer

Portfolio Case Study | LinkedIn | GitHub | Upwork

Ballyshannon, Co. Donegal | valeranavalni@gmail.com | 085 712 61 73

PERSONAL PROFILE

Driven Software Development student on track for First Class Honours, with an aptitude for databases and developer tooling. Built hands-on experience with MongoDB Atlas, PostgreSQL, and Redis through real projects — from connecting to MongoDB's own sample_mflix dataset via a custom Express.js REST API, to deploying and maintaining a production PostgreSQL CMS for a live business. Equally comfortable on the command line (Linux, Bash, Docker) and in the browser (Angular, Tailwind). Won a national hackathon track under a 5-hour build constraint. Trilingual — English, Ukrainian, Russian — with a 2 years background in high-pressure, precision-critical interpretation. Looking to bring that same rigour to building at the world's leading developer data platform.

KEY SKILLS

Languages & Frameworks: Python (Flask), JavaScript/TypeScript (Node.js, Express.js, Angular), Bash scripting, C#/.NET, HTML5, CSS3 (Tailwind, Bootstrap, SASS), XML.

Databases & Data: MongoDB Atlas (Atlas, Compass, sample_mflix dataset), PostgreSQL (schema design, automated backups), Redis (caching), SQLite, SQL Server Management Studio, Directus CMS.

DevOps & Infrastructure: Docker, DigitalOcean VPS (Ubuntu), GitHub Actions CI/CD, Vercel, AWS, Cloudflare, Namecheap. Comfortable with Linux server management and shell scripting.

Applications & Tools: Visual Studio / VS Code, Figma (UX/UI), n8n / Make.com (workflow automation), IBM Watson Studio, Microsoft Office Suite.

Version Control: Git / GitHub — GitHub Foundations Certified.

AI & Machine Learning: Practical ML skills via IBM AI Fundamentals with Capstone Project Certification. Applied AI integration in production hackathon project.

Languages: Fluent English (EF SET C2); Native Ukrainian and Russian.

EDUCATION

Sep '24 – Present Atlantic Technological University Sligo / Ash Ln, Ballytivnan, Sligo, F91 YW50

Bachelor of Science (Honours) in Software Development, NFQ QQI L6

- *Web Design & Development, Client-Side Scripting, Introduction to Database Technology, OOP, Mathematics, Requirements Engineering*
- *Year of Graduation: 2026*

Sep '13 – May '24 School №296, Kyiv

- ***Leaving Certificate — deep study of foreign languages***

TECHNICAL PROJECTS

MovieCollection | Express.js, MongoDB Atlas, Angular

Full-stack movie browser in a monorepo — one command spins up both the REST API and the Angular frontend simultaneously.

- Connected to MongoDB Atlas using MongoDB's own **sample_mflix** dataset — imported via Compass, queried through a custom Express.js REST API.
- Hands-on with the full MongoDB workflow: cluster creation on Atlas, environment-based connection string configuration via .env, collection setup in Compass, and bulk JSON data import.
- Architected the monorepo with **concurrently** so **npm run dev** boots backend and frontend together — clean DX, no split terminal.

PropertyManagerOS | Hackathon Winner — Lette Track | Flask (Python), SQLite, Tailwind CSS

Won the Lette track — built an AI-integrated property management platform in a 5-hour sprint that tackles a genuinely underrated problem: managers drowning in repetitive tenant requests like *"When are the bins collected?"*

- Owned DevOps end-to-end — configured CI/CD workflow of the team with GitHub Actions and bridged two package ecosystems (uv for Python, npm for Tailwind) into one seamless workflow, freeing backend teammates to focus on shipping features.
- Integrated the AI-powered Flask backend into a responsive Tailwind frontend — full user flow from tenant submission, through the manager's dashboard, to autopilot urgency categorisation and pre-generated replies.
- Ran usability tests early under extreme time pressure, shipping an interface intuitive enough to need no explanation during the live demo.
- Resolved team merge conflicts in real time — keeping momentum through one of the most compressed build windows imaginable, 5 hours from start to submission.

CMS & DB Management for VELOUROSS | Directus, PostgreSQL, Redis, Docker

Deployed and maintain a production CMS for a jewellery business — live at cms.velouross.com, self-hosted on a DigitalOcean VPS via Docker.

- Handle server hardening, weekly system updates, and automated PostgreSQL backups — a real business's data stays safe with zero manual intervention, stored in Cloudflare R2 object storage.
- Collaborated with the client to define an e-commerce database spec from scratch, then designed a PostgreSQL schema built for scale — laying the groundwork for future expansion without a rebuild.
- Integrated Redis for caching, keeping the CMS responsive as the product catalogue grows.

WORK EXPERIENCE

Sep '24 – Present Translit / Crescent House (4th floor), Hartstonge Street, Limerick, V94 K35Y0

Freelance Community Interpreter

- Deliver precise real-time interpretation (English, Ukrainian, Russian) in high-pressure legal and public service environments, demonstrating analytical thinking, accuracy, and professional communication. Achieved EF SET C2 (Proficient).

Feb '25 – Jul '25 Osta Cafe & Wine Bar / Garavogue Weir View, Stephen St, Rathquarter, Sligo

Front Of House (FOH)

- Independently managed full café operations in a fast-paced environment, demonstrating ownership, adaptability, and time management.

CERTIFICATIONS & ACTIVITY

- **Innovation:** Contributed to and presented Smart Trawling Systems for Low Carbon Footprint to industry experts during the IFTP Ireland 2025 innovation sprint.
- **Community & Leadership:** Supported peers on mental health as an ATU Togetherall Trained Peer and advocated for student accommodation on RTÉ — demonstrating leadership and social responsibility.

INTERESTS

UX/UI Design: Strong interest in user-centric design; developed practical Figma skills through self-directed learning and created full light and dark theme mock-ups for my personal portfolio, informed by Requirements Engineering principles.

Calisthenics & Learning Mindset: Apply progressive overload from calisthenics to software — iteratively improving skills, refactoring code, and tackling increasingly complex technical challenges.
